EXAMINER

GELIN, JEAN ALLAND

ART UNIT	PAPER NUMBER
----------	--------------

2681

DATE MAILED: 08/05/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	09/933,914	LEUNG ET AL.	
	Examiner	Art Unit	
	Jean A. Gelin	2681	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 June 2005.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-11 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-11 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 03 March 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This is in response to the Applicant's Request For Continued Examination (RCE) filed on June 28, 2005 in which claims 1-11 are currently pending.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 3-4 are rejected under 35 U.S.C. 102(a) as being anticipated by Gagnon et al. (EP 1 024 661 A2).

Regarding claim 3, Gagnon teaches a communication signal transmitted on a carrier wave (i.e., broadcasting video over the air, col. 10, lines 45-55), the signal comprising: a broadcast session portion (i.e., broadcasting video, col. 6, lines 25-39, col. 29, line 39 to col. 31, line 57); wherein the SDP provides information for processing the broadcast session (i.e., providing information including actions to be taken on receipt of the information, col. 29, line 39 to col. 30, line 57).

Gagnon further teaches a session description protocol message (SDP message) interleaved with the broadcast session portion (i.e., actions to be taken on receipt of the information interleaves with the standard field of the SDP protocol that includes various types of information such as video/audio signals, session identifier, the name of the SDP session, list of Internet WebPages, col. 29, line 39 to col. 30, line 57).

Regarding claim 4, Gagnon further teaches wherein the signal is transmitted via a broadcast transmission channel (col. 8, line 53 to col. 9, line 11).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1, 2, 5-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gagnon et al. (EP 1 024 661 A2) in view of Quick Jr. (5,673,259).

Regarding claim 1, Gagnon teaches in a wireless communication system supporting a broadcast service (i.e., system that broadcast video or multimedia data over the air, col. 10, lines 45-55), a method comprising: transmitting a broadcast session on a broadcast transmission channel (i.e., the broadcast session is video programming or multimedia data, col. 10, lines 45 to col. 11, line 17).

Gagnon further teaches "transmitting broadcast overhead information" interleaved with the broadcast session on the broadcast transmission channel (corresponding to col. 11, line 46 to col. 12, line 26, wherein the transmission of packet data, the packetized data stream includes a header that identifies the contents of data packet (audio/video programming) (i.e., the header that identifies the content is included in the broadcast signal). In another word, the header interleaved with the audio and video programming.

Gagnon does not explicitly teach wherein the broadcast overhead information provides information for processing the broadcast session.

However, the preceding limitation is known in the art of communications. Quick Jr. teaches broadcasting system overhead information wherein the information is interleaved with paging and control message on a broadcast channel; the overhead information is sent by the base station to control parameter, and a processor to process message and switch from one channel to another based on bandwidth demand (col. 4, lines 39-61, col. 11, lines 10-20, and col. 15, lines 26-44). Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to implement the technique of Quick Jr. within the system of Gagnon in order that when the bandwidth demand of the user exceeds the first threshold, the processor switches the user from the random access channel to the traffic channel.

Regarding claim 2, Gagnon in view of Tsukamoto teaches all the limitations above. Gagnon further teaches wherein the broadcast packetized data, which includes the header information is a session description protocol message containing information for processing the broadcast session, and wherein the session description protocol message is interleaved with broadcast content of the broadcast session (col. 30, line 4 to col. 31, line 57).

Regarding claims 5, 7, Gagnon teaches in a wireless communication system supporting a broadcast service (i.e., system that broadcast video or multimedia data over the air, col. 10, lines 45-55), a method comprising: accessing a broadcast session

Art Unit: 2681

on a broadcast channel; and processing the broadcast session using the SDP message (col. 29, line 39 to col. 30, line 57).

Gagnon further teaches receiving a session description protocol (SDP) message interleaved to the broadcast session on the broadcast channel (corresponding to session description protocol (SDP) are periodically broadcast or periodically receive, col. 13, line 49 to col. 14, line 12), the standard field of the SDP protocol includes various types of information such as video/audio signals, session identifier, the name of the SDP session, list of Internet WebPages that can provide additional information, col. 29, line 39 to col. 30, line 57).

Gagnon does not explicitly teach wherein the broadcast overhead information provides information for processing the broadcast session.

However, the preceding limitation is known in the art of communications. Quick Jr. teaches broadcasting system overhead information wherein the information is interleaved with paging and control message on a broadcast channel; the overhead information is sent by the base station to control parameter, and a processor to process message and switch from one channel to another based on bandwidth demand (col. 4, lines 39-61, col. 11, lines 10-20, and col. 15, lines 26-44). Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to implement the technique of Quick Jr. within the system of Gagnon in order that when the bandwidth demand of the user exceeds the first threshold, the processor switches the user from the random access channel to the traffic channel.

Regarding claim 6, Gagnon in view of Quick, Jr. teaches all the limitations above. Gagnon further teaches wherein the SDP message is interleaved with broadcast content of the broadcast session (col. 30, lines 4-32).

Regarding claim 8, Gagnon in view of Quick, Jr. teaches all the limitations above. Gagnon further teaches means for receiving header compression information (col. 29, line39-42).

Regarding claim 9, Gagnon in view of Quick, Jr. teaches all the limitations above. Gagnon further teaches memory storage adapted to store the SDP corresponding to a plurality of broadcast sessions, wherein the SDP of each of the plurality of broadcast sessions is updated when the corresponding broadcast session is accessed (col. 29, line 39 to col. 30, line 54).

Regarding claim 10, Gagnon in view of Quick, Jr. teaches all the limitations above. Gagnon further teaches wherein the memory storage is a cache memory (i.e., SDP+ records various information that can use in the system, col. 30, lines 24-32).

Regarding claim 11, Gagnon in view of Quick, Jr. teaches all the limitations above. Gagnon further teaches wherein the memory storage is a look up table (col. 31, lines 17-25).

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jean A. Gelin whose telephone number is (571) 272-7842. The examiner can normally be reached on 9:30 AM to 7:00 PM.

Art Unit: 2681

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Feild can be reached on (571) 272-4090. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
